Release 0.1.0-beta

Marco Bartolini

Feb 03, 2022

This project provides an authentication service for use by the taranta suite for authenticating and authorising users and identifying their shared groups

CHAPTER 1

Creating a ver basic user for authentication

Create a .env file and mount it as a volume in the docker-compose file, containing the following entries: .. code-block:

```
LDAP_CREDENTIALS=  
LDAP_URL=  
LDAP_BIND=
```

Build and run: .. code-block:

```
$ docker-compose build  
$ docker-compose up
```
